ChemPep supplies custom peptides, Fmoc amino acids, Boc amino acids, Cbz amino acids, unusual amino acids, solid phase resins, linkers, N-protecting reagents; specializing in custom peptide synthesis. Oligonucleotide synthesis - Wikipedia Oligonucleotide synthesis is the chemical synthesis of relatively short fragments of nucleic acids with defined chemical structure (). The technique is extremely useful in current laboratory practice because it provides a rapid and inexpensive access to custom-made oligonucleotides of the desired sequence. Whereas enzymes synthesize DNA and RNA only in a 5' to 3' direction, chemical ... Epoxide - Wikipedia An epoxide is a cyclic ether with a three-atom ring. This ring approximates an equilateral triangle, which makes it strained, and hence highly reactive, more so than other ethers. They are produced on a large scale for many applications. In general, low molecular weight epoxides are colourless and nonpolar, and often volatile. **Recent development in peptide coupling reagents ...** The formation of a peptide bond between two amino acids involves two steps. The first step is the activation of the carboxyl group of one residue; this step accounts for a key step in the synthesis of a large number of bioorganic molecules, in particular during peptide synthesis (Sheehan and Hess, 1955). If the activation of carboxylic acid is slow, the coupling reagents will be degraded and ... **Chemistry – A European Journal: Vol 0, No 0** The synthesis and application of boron cluster compounds has fascinated chemists since their discovery several decades ago. This work comprises the preparation of three-dimensional diborabenzoxazole analogues with the closo-dodecaborate in place of the benzene moiety. These 3D heterocycles exhibit antibiotic activity against *Neisseria gonorrhoeae*, a bacterial pathogen that has shown ... **Review: Synthetic Methods for Amphetamine** Review: Synthetic Methods for Amphetamine A.
