"Nominal scores are normalized to give 'bit scores' (S'): $S' = \frac{S}{K \ln 2}$ Allows comparison of alignments scored by different methods K and λ are statistical parameters that relate the calculated score to the probability finding a hit with at least that score. BLASTING TECHNICAL INFORMATION - mcfinishing.com blast hose ID, the nozzle ID, the pressure pot and pot piping are all much larger on the blast rooms than cabinet systems. The increase in production is also due to the further distance that the nozzle is from the work piece in blast rooms creating a larger blast pattern.
