Sir Isaac Newton computed the speed of sound in air as 979 feet per second (298 m/s), which is too low by about 15%. Newton's analysis was good save for neglecting the (then unknown) effect of rapidly-fluctuating temperature in a sound wave (in modern terms, sound wave compression and expansion of air is an adiabatic process, not an isothermal process). https://en.wikipedia.org/wiki/Speed_of_sound PHYSICAL SETTING PHYSICS - NYSED P.S./Physics–June '12 [2] Part A Answer all questions in this part.
